Mr. Thomas Venturella was graduated from the School of The Art Institute of Chicago and the University of Chicago with a BFA degree in painting. He moved to New York City in 1969. The VENTURELLA STUDIO was established in 1985 and is owner operated. Mr. Venturella, owner and Senior Conservator, has been working solely with stained and leaded glass since 1969. He oversees all fabrications of new work and is directly responsible for all restorations. The Studio specializes in conservation and restoration of historical stained glass from Medieval Europe to Twentieth century America.

Thomas Venturella is a member of the International Institute for Conservation (IIC) and the American Institute for Conservation (AIC). His studio work procedures have been recognized by AIC as being wholly professional and totally within the philosophy of that organization. He was awarded “Professional Associate” status by AIC making him the first stained glass conservator in the United States to be so recognized. All restoration and conservation work done at the VENTURELLA STUDIO is in stringent compliance of both IIC and AIC accepted practices.

**STUDIO RESTORATION PHILOSOPHY AND TECHNIQUES:**

The Studio prides itself in its reputation for the conscientious approach to the restoration of glass. While the primary concern is stained and leaded glass windows, also included is the restoration of lamps, vessels, sculptures, and uncategorized glass objects. The objective of all restoration and conservation treatments carried out at The Venturella Studio is to retain the integrity of each object as it was conceived, designed, and fabricated. This can only be done when there is as thorough as possible an understanding of the artist, the time period in which the object was produced, the initial intent for the object and how it was to function, and the object itself. We research historical material whenever possible in order to shed light for a clearer understanding. Close examination of the object can also turn up information. When original material is missing, clues have been found within the object itself such as the discovery of original glass fragments which failed to be removed during previous repairs.

Documentation is a critical step in a thorough conservation treatment. Photographs in both film and the digital media are taken. In the case of leaded glass panels, rubbings are made. Where American Opalescent window design patterns differ in their exterior and interior surfaces, photographs of both sides of the window are recorded in reflected and transmitted light. Photographs are also taken to document the restoration progress. Photographs are included with conservation reports which are then presented to the client upon completion of the treatment, when requested. Original material is retained whenever possible with broken glass being repaired in one of the following methods: 1) Silicone edge gluing is used when large expanses of glass are to be returned to an area within the panel that placed stress on the glass. This allows the silicone to act as a flex joint thereby eliminating the need of an additional lead, which would alter the original design. 2) Hxtal NYL-1, a two part epoxy which has a light refractive index closely matching that of glass, is used when additional lead lines will only destroy the integrity of the original design. 3) Finely cut copperfoil where a minimal repair line is required.
The Charles Hosmer Morse Museum of American Art, Winter Park, Florida

The Venturella Studio is the Conservation Studio of choice for the Morse Museum’s extensive collection of Tiffany glass.

- “Eggplants” & “Squash” 1879
  These two windows for the George Kemp house were the first private residential commissions by Tiffany.

- “Art Gallery Window” 1918
  Restoration and reconfiguration of three stained glass windows, plus ornamental metal sculptural elements. This ensemble was prominently featured over the door to the Art Gallery at Louis Comfort Tiffany’s home “Laurelton Hall” at Oyster Bay, NY.

  Three windows in the Tiffany Chapel at The Columbian Exposition of Chicago, 1893:
  - “Field of Lilies”
  - “Christ Preaching to the Evangelists”
  - “The Story of the Cross”

  Chapel of the Association for the Relief of Respectable Aged and Indigent Females:
  - “Nixon Memorial Window”
  - “McCorkle Memorial Window”
  - “Dunning Memorial Window”
  - “Innis Memorial Window”
  - “Minton Memorial Window”

  Surround panels for “The Four Seasons” from the Paris Exposition of 1900, and later used in the loggia of Laurelton Hall, Oyster Bay, NY:
  - “Eagle”
  - “Urns”
  - “Four Ornamental Side Panels”

The Metropolitan Museum of Art, The Cloisters, New York, NY

- All new leaded glass in the newly renovated Early Gothic Galleries
- New leaded glass and painted replications of medieval glass for Langon Chapel
- “Six Standing Saints Above Predella Panels” 1440-1446
  Redesign installation of six windows from the Carmelite Convent Church at Boppard on Rhine, Germany
- “The Circumcision”, “The Adoration of the Magi”
  Redesign installation of two Burgos panels for inclusion in the Boppard galleries.
- Restoration of fifteen medieval stained glass windows and fragments for installation into the new Early Gothic Galleries at the Metropolitan Museum of Art.

The Metropolitan Museum of Art, New York City

- “The Luminous Image: Painted Glass Roundels in the Lowlands, 1480-1560”
  Design and fabrication of 39 leaded glass diamond-lite panels into which were set 70 pieces of art from various museum collections around the world. The first roundel exhibition of its kind in the United States.
- “ Firescreen” John La Farge, 1887
- Design, fabrication, and installation of three bays of leaded glass for newly designed Early Gothic Galleries.
Christie’s, Inc.

- “An Important Leaded Glass and Bronze Table Lamp”
  Restoration of a double pedestal lamp designed by Frank Lloyd Wright, executed by the Linden Glass Company for the Susan Lawrence Dana House, Springfield, Illinois, 1903. Lamp brought $1.98 million at auction.

- “Frank Lloyd Wright”

Frank Lloyd Wright Foundation, Taliesin West, Scottsdale, Arizona

- “Hanging Chandelier” 1902-1905
  Restoration to one of four chandeliers designed and fabricated by Frank Lloyd Wright for the William R. Heath House, Buffalo, NY.

- “Dining Room Cabinet Window”
  Restoration of a brass came, clear, and iridized glass panel for a built in side-board cabinet in the dining room of the Susan Lawrence Dana House, Springfield, Illinois, 1903.

First Presbyterian Church of Lockport, New York

- Restoration of the Pomroy Memorial window “Christ & the Pilgrims”, Tiffany Glass and Decorating Co., 1896
- Restoration of the Adriance Memorial window “Resurrection Morning”, Tiffany Glass and Decorating Co., 1901

The Huntington Library, Art Collections, and Botanical Gardens, San Marino, CA

- Restoration of “Thistle” window by George Maher for the James A. Patten House, Chicago, Ill 1901

Yale University, New Haven, CT

- Newly designed and fabricated 96 sq. ft. ornamental skylight

Princeton University, Princeton, New Jersey

- Newly designed and fabricated 68 sq. ft. window for The Ivy Club, commemorating the inclusion of women into the Club.
Private Owner

- “Le Jardin”, 1895 Louis Comfort Tiffany after a cartoon by Ker-Xavier Roussel for Siegfried Bing’s Galerie de l’Art Nouveau, Paris

Private Owner

- “Beebe Memorial Window”, Tiffany Studios 1918
  Formerly property of the YWCA of the City of New York
  This large twelve sectioned window was removed from its original location in NYC in 1999.
  This window was completely restored and a new steel framing unit was designed and fabricated for installation at the new location.

The Richard H. Driehaus Art Collection, Chicago, Illinois

- “The Birth of Aphrodite”, 2 pair
- “The Chariot of Thetis”, 1 panel
  Five verre églomisé panels by Jean Dupas for the Grande Salon of the ocean liner “Normandie” 1935. One panel was broken into five sections. Conservation treatment included edge gluing, the duplicating of missing paint, and metal leafing to match original artwork. Backing fabric to all panels was re-attached. Panels were cleaned on the interior and exterior surfaces.
